Application DBA

The application DBA role involves logical database design, reporting and the ongoing support and administration of databases pertaining to enterprise business applications. The application DBA is responsible for writing and debugging complex SQL and understands the best ways to incorporate database requests into application programs. The Application DBA is deeply involved in requirements definition, design, development, deployment, maintenance and enhancement of applications working as part of Application Development team, with specific focus on databases.

The position will play a primary role in multiple projects, simple to challenging, with small to very large and complex SQL Server implementations. The application DBA will play an integral role in the development of the new Authority analytics data platform. This position requires a positive attitude and the ability to remain flexible in a dynamic and fluid environment.

Education & Experience Requirements:

- Bachelor's degree in computer science, engineering or similar
- Minimum five years of professional experience as a SQL Server Application DBA with MS SQL Server 2008 and up
- Configuration and deployment experience for SSIS, SSRS and SSAS in online and data warehouse environments
- Strong knowledge of reporting services; Microsoft Reporting Services, Business Objects, etc.
- Strong knowledge of database design principles in data warehousing environment, database logical and physical design
- Highly competent in SQL database performance tuning, creation of right indexing strategy to meet data growth needs and performance monitoring and query optimization using SQL Profiler
- Strong SQL skills to provide code review and tuning feedback to the development team
- Strong knowledge of database administration, Software Development Life Cycle (SDLC), and systems analysis procedures
- Experience in application development tools (e.g. GIT, Visual Studio team services and source control), testing, and process and configuration management
- Effectively communicates and documents technical architecture and solutions to internal peer groups as well as other groups
- A team player with solid communication skills, excellent at problem solving, troubleshooting, and embracing new challenges
- Positive attitude and the ability to remain flexible in a dynamic environment
- Ability to manage time across multiple, simultaneous projects
- Must demonstrate the ability to work effectively as a member of a team, as well as the maturity to work independently.
