

SharePoint Developer

The role involves designing and developing solutions using SharePoint. The SharePoint Developer is responsible for solution design / development and contributing to the continued growth of our SharePoint capability. Lead activities to develop, enhance, and maintain SharePoint sites and modules that interface to and augment our business systems. Documents as well as assist in applying best practices and continuous improvements in build, deployment and testing process. Must have the ability to develop large-scale SharePoint web sites. Must demonstrate proficiency in all aspects of the software development lifecycle and have a solid understanding of object-oriented programming. Performs the typical functions of the Developer role, but also puts together product concepts, architecture solutions, performs some creative design, rapid prototyping, and high-level, technical review/analysis of SharePoint technologies.

The position will have a high involvement in new projects and ongoing enhancements of our SharePoint environment. The position requires a deep understanding of SharePoint design and development. Must demonstrate the ability to work effectively as a member of a team, as well as the maturity to work independently from time to time. This position requires a positive attitude and the ability to remain flexible in a dynamic environment.

Education & Experience Requirements:

- Bachelor's degree in computer science, engineering or similar
- Minimum five years of professional experience architecting/operating solutions build on SharePoint
- Minimum five years of experience developing applications for SharePoint 2013/2016/SharePoint using custom web parts, SharePoint Designer and Visual Studio
- Strong knowledge of SharePoint platform interoperability strategies, risks, and challenges
- Experience with SharePoint Framework (SPFx) is required
- Experience with custom development using SharePoint Business Connectivity Services, Master Pages, Apps, Page Layouts, User Store, Web Parts, SharePoint Object Model (OM)
- Minimum five years of experience in software development using, C# , VB.NET, ASP.NET MVC and REST
- Experience in client side development (HTML, CSS, JavaScript, JQuery)
- Experience in application development tools (e.g. GIT, Visual Studio team services and source control), testing, and process and configuration management
- Experience with one or more database platforms (MS SQL Server, MySQL)
- Experience in backend integration and usage of REST APIs
- Effectively communicates and documents technical architecture and solutions to internal peer groups as well as other groups
- A team player with solid communication skills, excellent at problem solving, troubleshooting, and embracing new challenges
- Positive attitude and the ability to remain flexible in a dynamic environment
- Ability to manage time across multiple, simultaneous projects
- Strong knowledge of SharePoint out of the box features for creating webpages, forms, workflows and App Catalog are a must
